Phone: 886-7-5252000 ext. 5104

Expertise: Electroanalytical Chemistry of Seawater, Inorganic Trace Analysis of Seawater, Isolation and Analysis of Aquatic Colloids

Research interests: The main thrust of my recent work has been on land-ocean interactions, specifically the fate of land-derived carbon and trace metals as organic-rich plumes travel away from river mouths and mix with surrounding ocean waters. I am also interested in the development of analytical methods required to study biogeochemical processes along the land-ocean aquatic continuum where their characterisation is challenging owing to the inherent measurement difficulties and the intensification of processes.
